

Sandalwood Face Cream

Invention summary:

Face cream formulated using Sandalwood extract

Technology overview:

Face and Neck Creams are products that are intended to moisturize and soften the face. They are often semi-solid emulsions of oil and water. Face creams contain special ingredients that help to replace the oils contained in the skin or to protect against the loss of moisture from the skin. The safety of Face Creams is established by selection of ingredients that are safe and suitable for this purpose. Using Sandalwood as a main ingredient provides extra benefits of prevention from acne, skin exfoliation and suntan removal while reducing signs of ageing such as dry skin and wrinkles.

Potential Application:

Can be applied as a face cream

Advantages of the Sandalwood Face Cream:

- All ingredients are available in the local market
- Can be made at the domestic levels hygienically
- It contains less chemical
- Machineries can be fabricated locally

Inventor /s:

Ms. P.I.P.K. Fernando
